PROFESSIONAL SUMMARY

Full-Stack Software Engineer skilled in **Node.js, React, PostgreSQL, AWS, and OpenAI API**, with hands-on experience delivering production-grade SaaS platforms, **AI/ML applications**, and secure payment systems. Built Mentora — a real-world AI tutoring SaaS with microservices, RAG pipelines, and RBAC — and solved **400+ DSA problems** on LeetCode & GeeksForGeeks.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript

Backend: Node.js, Spring Boot, REST APIs, JWT, RBAC, Microservices

Frontend: React.js, Next.js, HTML, Tailwind CSS

Databases: PostgreSQL, MySQL, MongoDB, Prisma ORM,

Data & Streaming: Apache Kafka, WebSocket, Real-Time Processing, Event-Driven Systems

AI/ML: Scikit-learn, TF-IDF, Cosine Similarity, DeepLearning4J (DL4J), OpenAI API, LangChain, RAG

Cloud & DevOps: Docker, AWS (EC2, S3, SES), Git, Linux, Postman

Engineering Practices: System Design, CI/CD, Agile/Scrum, OWASP Security, Performance Optimization

Problem Solving: 400+ DSA Problems (LeetCode, GeeksForGeeks)

PROFESSIONAL EXPERIENCE

Machine Learning & Database Intern — *Elavate Labs*

2 months | Python, PostgreSQL, Scikit-learn, Docker

- Optimised PostgreSQL queries, reducing average execution time by ~15% through index tuning and query restructuring.
- Designed SQL views and stored procedures for automated KPI reporting, eliminating manual data pulls.
- Built ML classification pipelines using Scikit-learn; supported end-to-end Docker-based deployment of ML services.
- **Software Engineer (Client Project) — Dynamic Queue Management SaaS | "Fab 2026 – Mar 2026"**
- Node.js • React • Socket.io • WebSocket • Twilio • JWT • MongoDB
- Built and sold a production queue automation SaaS deployed across 2 hospitals, managing 60–80 daily patient tokens with real-time staff dashboards and dynamic scheduling.
- Designed JWT-based RBAC (Owner/Staff/Customer) with secure REST APIs for booking, queue control, and admin operations.
- Implemented real-time queue sync via Socket.io and automated SMS alerts using Twilio — notifying patients by location and slot time, reducing unnecessary early visits and staff workload.
- **Web Developer (Client Project) — Network Marketing Static Website | "Apr 2026"**
- Delivered and deployed a responsive static website for a Network Marketing client, improving online presence and user accessibility.

ENGINEERING PROJECTS

AI-Powered Tutoring SaaS Platform

github.com/munavvarshaikh314/mentora-backend | Node.js • React • Prisma • PostgreSQL • OpenAI API • Docker • AWS

- Engineered full production SaaS platform supporting student registration, mentor booking, and role-based dashboards.
- Designed microservice-style architecture separating authentication, payments, and recommendation services — improved API throughput by ~40% via Dockerised deployment and rate limiting.
- Built semantic search & recommendation engine using TF-IDF + cosine similarity, surfacing mentor matches with >85% relevance accuracy in user testing.
- Implemented JWT-based RBAC with granular permission layers across student, mentor, and admin roles.

Enterprise Payment & Ledger System (Microservices + Observability)

<https://github.com/munavvarshaikh314/mern-enterprise-payment> | TypeScript • PostgreSQL • MongoDB • Razorpay • Redis • Prometheus • ELK

- Built a **microservices-based payment platform** with **Nginx API Gateway** and **hybrid databases (MongoDB + PostgreSQL)**.
- Implemented **secure auth & access control** using **JWT (HttpOnly cookies)**, **RBAC**, **Zod validation**, and **rate limiting** aligned with OWASP standards.
- Integrated **Razorpay payments** with **PDF invoice generation**, **AWS SES email notifications**, and **Prometheus + ELK observability**..

Real-Time Analytics Platform

github.com/munavvarshaikh314/realtime-analytics-project | Java • Spring Boot • Apache Kafka • ML • H2/MySQL • Docker • DL4J • REST APIs

- Built end-to-end analytics system via Apache Kafka + Spring Boot, ingesting IoT, social media, and finance tick data through event-driven microservices; persisting anomaly alerts, trending, and sentiment insights to H2/MySQL (JPA/Hibernate).
- Developed WebSocket dashboard streaming real-time metrics, alerts, and predictions with sub-second latency for clients.
- Integrated DL4J LSTM time-series forecasting with async training, model persistence, and inference for market prediction workflow

EDUCATION : B.E in computer engineering — Universal College of Engineering, Mumbai | 2025

CERTIFICATIONS: AWS Certified Cloud Practitioner | Machine Learning Specialization — Andrew Ng (Coursera)
