

Munavvar Shaikh

Mumbai, India | Open to Onsite / Hybrid / Remote | shaikhmanwar77@gmail.com | +91-7021544874 | github.com/munavvarshaikh314 | linkedin.com/in/munavvar-shaikh

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with hands-on experience delivering **production client projects**, SaaS platforms, and AI/ML systems using **Node.js, React, Spring Boot, PostgreSQL, and OpenAI API**. Built and sold a **Queue Management SaaS deployed in 2 hospitals**. Experienced in **Agile, CI/CD, microservices, Kafka, Docker, and AWS**. Solved **400+ DSA problems** on LeetCode & GeeksForGeeks. AWS Certified.

TECHNICAL SKILLS

Languages	Python, JavaScript, TypeScript, Java
Frontend	React.js, Next.js, HTML, Tailwind CSS
Backend	Node.js, Spring Boot, Express.js, REST APIs, Microservices, JWT, RBAC, Rate Limiting
Databases	PostgreSQL, MySQL, MongoDB, Redis, Prisma ORM
Data & Stream	Apache Kafka, WebSocket, Socket.io
AI / ML	LangChain, Agentic AI, OpenAI API, TF-IDF, Scikit-learn, Pandas, TensorFlow
Cloud & DevOps	AWS (EC2, S3, SES), Docker, CI/CD, Git, Linux, Prometheus, ELK Stack
Practices	System Design, OWASP Security, Performance Optimisation

PROFESSIONAL EXPERIENCE

Software Engineer — Queue Management SaaS (Client Project)

Feb 2026 – Present | Node.js • React • Socket.io • WebSocket • Twilio • JWT • MongoDB

- **Built and sold a production SaaS deployed across 2 Clinics**, managing 60–80 daily patient tokens with real-time staff dashboards and dynamic scheduling.
- Designed JWT-based RBAC (Owner / Staff / Customer) with secure REST APIs for booking, queue control, and admin operations.
- Implemented real-time queue sync via Socket.io and automated SMS alerts via Twilio — reducing unnecessary patient wait times and staff workload.
- Designed validation and fault-handling workflows to prevent duplicate tokens and ensure queue consistency during reconnects.

Web Developer — Network Marketing Website (Client Project)

Apr 2026 | HTML • CSS • JavaScript • Responsive Design

- Delivered and deployed a responsive static website for a Network Marketing client, improving online presence and user accessibility.

Machine Learning & Database Intern — Elavate Labs | Remote

2 months | Python • PostgreSQL • Scikit-learn • Docker

- Optimized PostgreSQL queries, reducing average execution time by ~15% through index tuning and query restructuring.
- Designed SQL views and stored procedures for automated KPI reporting, eliminating manual reporting workflows.
- Built ML classification pipelines with Scikit-learn; supported Docker-based CI/CD deployment of ML microservices.

ENGINEERING PROJECTS

Mentora — AI-Powered Tutoring SaaS Platform

github.com/munavvarshaikh314/mentora-backend | Node.js • React • PostgreSQL • LangChain • RAG • OpenAI API • Docker • AWS

- Microservices architecture with Dockerised CI/CD improved API throughput by ~40%; built RAG pipeline using **LangChain + OpenAI Embeddings** Achieved 85% match accuracy on 150-user test set vs 61% baseline keyword search.
- Implemented JWT + RBAC with role dashboards for students, mentors & admins; followed OWASP security practices throughout.
- Engineered a production-grade tutoring SaaS platform supporting student onboarding, mentor booking, and role-based dashboards.
- Wrote unit and integration tests validating Kafka message processing, persistence logic, and WebSocket stability.

Enterprise Payment & Ledger System

github.com/munavvarshaikh314/mern-enterprise-payment | TypeScript • PostgreSQL • MongoDB • Redis • Razorpay • Prometheus • ELK • Nginx

- Built microservices payment platform with Nginx API Gateway, hybrid DB (MongoDB + PostgreSQL), and **Prometheus + ELK observability**.
- Secure auth via JWT (HttpOnly cookies), RBAC, Zod validation, rate limiting; Razorpay integration with PDF invoices & AWS SES
- Implemented monitoring dashboards using **Prometheus + Grafana** and centralized logging with **ELK** to debug failures and track system health.
- Designed ledger-style transaction tracking with idempotent APIs to prevent duplicate payment records during retries.

Real-Time Analytics Platform

github.com/munavvarshaikh314/realtime-analytics-project | Java • Spring Boot • Apache Kafka • DL4J • MySQL • Docker • WebSocket

- Ingested IoT, social media & finance tick data via **Apache Kafka + Spring Boot** event-driven microservices; persisted anomaly alerts and sentiment insights to MySQL.
- Implemented consumer groups, partition-based parallelism, and offset handling to support scalable real-time processing.
- WebSocket dashboard streaming real-time metrics with sub-second latency; integrated DL4J LSTM forecasting for market prediction.

EDUCATION & CERTIFICATIONS

B.E in Computer Engineering Mumbai University 2025	✓ AWS Certified Cloud Practitioner ✓ Machine Learning Specialization — Andrew Ng (Coursera)
