Production Systems: SaaS Tutoring Platform • Payment Gateway Infrastructure • ML Job Recommendation Engine

PROFESSIONAL SUMMARY

Full-Stack Engineer building scalable backend systems, SaaS platforms, and AI-powered applications using Node.js, React, and SQL. Built production SaaS systems including an AI tutoring platform with semantic search. Strong foundation in REST APIs, authentication, and distributed systems. Solved 400+ Data Structures & Algorithms problems.

TECHNICAL SKILLS

Languages: Python, JavaScript, Java | Frontend: React.js, HTML, CSS, Tailwind

Backend: Node.js, Express.js, REST APIs, Authentication, RBAC

Databases: PostgreSQL, MongoDB, SQL, Prisma ORM

AI / ML: TF-IDF, Cosine Similarity, Semantic Search, OpenAI API, Scikit-learn, Pandas, NumPy

Cloud/Tools: AWS (EC2, S3, SES), Docker, Git, Linux, Postman

INTERNSHIP EXPERIENCE

Machine Learning & Database Intern — Elavate Labs | Remote | 2 months

- Optimized PostgreSQL queries reducing execution time by ~15%
- Developed SQL views and stored procedures for KPI reporting
- Assisted in building ML classification pipelines using Scikit-learn
- Supported Docker-based deployment of ML services

SELECTED ENGINEERING PROJECTS

AI-Powered Tutoring SaaS Platform

Stack: Node.js • React • Prisma • PostgreSQL • OpenAI API • Docker

Architecture: REST APIs • Authentication • RBAC • Recommendation Engine

- Engineered production SaaS tutoring platform enabling student registration and mentor booking
- Designed microservice-style architecture for authentication, payments & recommendation services
- Dockerized services improving API throughput by ~40% and implemented rate limiting
- Developed semantic search and recommendation engine using TF-IDF and cosine similarity

Secure Payment Gateway System

Stack: MERN • Razorpay API • JWT • AWS SES

Architecture: Payment Processing • RBAC • Two-Factor Authentication

- Implemented secure authentication using JWT with RBAC and two-factor authentication
- Integrated Razorpay UPI/card payments achieving ~99.9% success rate in testing
- Developed admin dashboard to track payment transactions and automated PDF invoice generation

Hybrid Job Recommendation System — MERN, Machine Learning

- Built machine-learning recommendation pipeline using TF-IDF feature extraction and cosine similarity ranking to match candidates with relevant job postings.
- Improved recommendation accuracy by ~35% over keyword-based search
- Designed ML-powered recommendation pipeline with REST APIs and React interface

EDUCATION: B.Tech— Information Technology | Universal College of Engineering, Mumbai | 2025

CERTIFICATIONS: AWS Certified Cloud Practitioner • Machine Learning Specialization (Andrew Ng)
